

FUND DESCRIPTION

The Fund seeks to replicate investment results that generally correspond, before fees and expenses, to the performance of the QuantX Dynamic Beta US Equity Index.

INDEX DESCRIPTION

Dynamic Beta US Equity Index is designed to create smarter risk exposure relative to FTSE/Russell 1000 Equal Weight Index benchmark. Security selection and portfolio beta are optimized in an effort to maximize upside/downside capture. This is accomplished by identifying companies that have more upside (good) volatility versus downside (bad) volatility using option market data. The overall portfolio beta is designed to dynamically adjust to changing market volatility in order to optimize risk-adjusted returns.

GOAL

Create a more asymmetric risk profile relative to the FTSE/Russell 1000 universe.

EXPOSURE PROFILE

Sector

- Consumer Discretionary 9.9%
- Producer Durables 6.5%
- Financial Services 17.7%
- Health Care 10.6%
- Energy 7.8%
- Utilities 11.9%
- Materials & Processing 5.5%
- Consumer Staples 22.3%
- Technology 4.6%
- Cash 3.3%

Size

- Medium 85.2%
- Large 11.6%
- Cash 3.3%

Factor

- Blend 37.9%
- Value 43%
- Growth 15.8%
- Cash 3.3%

There is no guarantee that this investment strategy will achieve its objectives, goals, generate positive returns, or avoid losses. Diversification does not ensure profit or protect against loss. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

PERFORMANCE (%) As of 12/31/2018

	One Month	Three Month	One Year	Since Inception*
XUSA at NAV	-9.65%	-12.77%	-3.69%	8.38%
XUSA at Market Price	-9.15%	-12.16%	-3.20%	9.05%
QuantX Dynamic Beta US Equity Index	-8.72%	-11.67%	-2.04%	10.37%
Russell 1000 Equal Weight Index	-9.64%	-15.37%	-8.77%	3.73%

*Inception Date: January 26, 2017

Past performance is no guarantee of future results. Current performance may be lower or higher than the performance data quoted above. Investment return and principal value will fluctuate, so that shares, when sold or redeemed, may be worth more or less than their original cost. ETFs are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Brokerage fees will reduce returns. Index returns assume reinvestment of distributions, but do not include fees or expenses. Indexes are not available for direct investment. Market returns are based upon the midpoint of the bid/ask spread at market close when NAV is determined, and do not represent the returns you would receive if you traded shares at other times. The market price may be above (premium) or below (discount) relative to the NAV.

Quantx Dynamic Beta US Equity ETF (XUSA)

Definitions:

Annualized Volatility: An annualized measure of how much the stock price fluctuated during a given time period.

Beta: The measure of a fund's sensitivity to market movements.

Sharpe Ratio: The ratio calculated by using standard deviation and excess return to determine reward per unit of risk.

Maximum Drawdown: The maximum loss from a peak to a trough of a portfolio, before a new peak is attained.

QuantX Dynamic Beta US Equity Index:

The Fund generally will invest at least 80% of its total assets in the component securities of the QuantX Dynamic Beta US Equity Index (the "Index"). The Index methodology selects domestic large and mid capitalization equity securities of companies listed on the Russell 1000 Index pursuant to a proprietary selection methodology that is designed to increase exposure to companies that have the highest estimated upside volatility relative to downside volatility while also managing overall portfolio risk by allocating to companies that have the lowest estimated downside volatility when the methodology indicates that the Fund should hold less risk exposure.

Upside and downside volatility are determined using primarily forward-looking measures of volatility from the equity options market. Under normal market conditions, the Fund invests at least 80% of its assets (defined as net assets plus borrowing for investment purposes) in domestic equity securities. The Fund defines equity securities as common and preferred stock, as well as total return swaps on those securities. The Index may have exposure to companies in any industry, country, and of any market capitalization.

The Index is reconstituted monthly and rebalanced as needed to stay within pre-determined thresholds for portfolio weightings. Due to the nature of the Fund's strategy, it may have relatively high portfolio turnover compared to other funds, which may lead to higher transaction costs that may affect the Fund's performance.

Disclosures:

Investors should carefully consider the investment objective, risks, charges and expenses of the QUANTX ETFs Funds. This and other information is contained in the prospectus and should be read carefully before investing. For a prospectus please call 866-270-0300. The Fund is distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Northern Lights Distributors, LLC and Blue Sky Asset Management, LLC are not affiliated.

ETFs involve risk, including possible loss of principal. There is no guarantee the fund will meet its objective.

The Fund may focus its investments in securities of a particular industry to the extent the Index does. The use of derivative instruments, such as swaps, involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Fluctuations in the value of equity securities held by the Fund will cause the net asset value ("NAV") of the Fund to fluctuate. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. The Fund is a new fund with a limited history of operations for investors to evaluate. As the Fund may not fully replicate the Index, it is subject to the risk that investment management strategy may not produce the intended results. Overall stock market risks may affect the value of the Fund. The Fund is not actively managed and the Adviser will not sell shares of an equity security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a rebalancing of the Index as addressed in the Index methodology. A higher portfolio turnover will result in higher transactional and brokerage costs. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Swaps are subject to tracking risk because they may not be perfect substitutes for the instruments they are intended to replace.
